

# HOME SECURITY TOP TIPS FOR DOG OWNERS.🐾

FOLLOW THESE TOP TIPS TO KEEP YOUR BELOVED POOCH SAFE🐾

## SMART ALARMS

Yale Smart Home Alarms range is ideal for remote access of your home alarm, managed from any location at any time via smartphone – with no monitoring fee!

Expandable accessories up to 200m range include outbuildings with real-time notifications in the palm of your hand – rest assured that your property is protected whether you're home or away.

Working with Philips Hue and Amazon Alexa, the Sync Smart Home Alarm links with lighting and voice control to create the ultimate deterrent.

For homes with dogs, the Smart Sync Alarm also comes with a part arm function, so there's no need to worry about your furry companion creating a false alarm.

## PET MOTION SENSORS

These clever devices act like a live security guard watching over your home. The built-in infrared sensor detects a pet (weighing less than 27kg) but doesn't trigger the alarm – because it knows anything that weighs less than two stone is your furry friend wandering around!

## INDOOR WIFI CAMERA

Yale indoor WiFi cameras allow you to keep an eye on what doggo is up to when you're not at home. Live stream any time of the day or night via tablet or smartphone – with two-way talk you can even have a listen and talk back!

It's possible to monitor any mischief and even watch it back whenever you want with the app's playback feature.

## OUTDOOR CAMERA

It's important to feel your family is secure both day and night. The Yale All-in-One Camera uses light and sound to double the deterrent outdoors.

Receive motion activated notifications when someone approaches your home and stream live footage via your smartphone.

Ideal for installation near the front door, monitor when the dog-walker drops in and thanks to two-way talk via the smartphone app, ask the delivery driver to leave your parcel out of your doggo's way!

# HOME SECURITY TOP TIPS FOR DOG OWNERS.🐾

FOLLOW THESE TOP TIPS TO KEEP YOUR BELOVED POOCH SAFE.🐾

## SMART LOCKS

Letting your four-footed friend in and out of the house, do you always ask yourself: did I lock the door? Simply check your smartphone to find out with Yale Smart Locks. Enjoy the benefit of remote access-sharing, grant entry to your parents or neighbours when they check in on your pets.

**7 out of 10 burglars gain access through the front door,** so it's essential to invest in the highest security available to prevent common attack methods.

## WINDOW LOCKS

According to The Home Office, **56% of burglaries take place during the evening,** so be wary of leaving windows open on a warm night when you go to bed. Windows should be secured with at least one appropriate, key-operated lock.

## GARDEN

Ensure the furry member of your family is protected whilst playing in your back garden. Waterproof padlocks are designed to withstand the great British weather and ensure the back gate is locked with the highest security.

Ensure all fences surrounding your garden are secure and tall enough to prevent anyone from reaching in – or four-feet jumping over!
